# SCOOTERBOY

**Your new quality of life.**

Enjoy it having possibilities.  
Enjoy it to use your electric vehicle at  
all times and everywhere.

With the SCOOTERBOY you will  
transport your electric vehicle in the  
easiest way. Nothing is in your way for  
an excursion.

Expand your cruising radius.

**Your new quality of life**  
flexible, mobil and free

## The loading

Scooter, electric vehicle or wheelchair are moved onto the platform and loaded into the vehicle just by pushing a button. Without any physical effort.

Even with just one hand the SCOOTERBOY is easy and safe to handle. Best suitable for MiniVANS and VANS.

The principle of the SCOOTERBOY is based extensively on the already a thousand-times proven LADEBOY – technique.

The loading  
without any physical effort

## The possibilities

The SCOOTERBOY can be installed either in the vehicle rear or parallel behind the driving seat or passenger seat. Due to the different platforms of the SCOOTERBOY the particular electric vehicle can be loaded either lengthwise or crosswise to the lift.

The extreme space-saving design of the SCOOTERBOY enables to use almost the full capacity of the interior of the vehicle in an optimal way.

The SCOOTERBOY is fixed predominantly at the car's original fasteners, the seat-fasteners or the eyelet fasteners.

This guarantees a reliable and safe installation and above all you keep the value of your car when you are going to sell it.

A complete backfitting can be done without any problems.

The possibilities  
safe and varied
